Having in the opening chapters considered the methods by which motion, and the modification of motion, may be represented and analyzed, and the basis upon which a proper classification of elementary mechanical combinations may be made, the next question was, what classes of such combinations should be first examined. So large a proportion of these consist of pieces rotating in contact about fixed axes, that they seemed to have a natural claim to precedence, which was duly recognized. Attention was accordingly next directed to the discussion of the pitch surfaces, and in natural sequence to the forms of...
